Art Unit: 2818

Response to Amendment

This Office Action is in response to Amendment filed on 8/15/2007

Claims 35-36 have been cancelled.

Claims 32, 34, 42, 45, 48, 49, 55-57,59, 60, 67 and 70-74 have been

amended.

Claims 32-34 and 37-89 are pending in the present application at the time of examination

Set of claims 32-34, 37-38, 41, 44-47, 65-66, 77-78 and 85-86

Independent Claim 32 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant introduces the new matter by adding:

"the first strained layer is compressively strained" into claim 32.

The added matter(s) is(are) not supported in the Specification and it (they) (is) are not satisfactory resolved and consequently raise doubt as to possession o the claimed invention at the time of filling.

The remaining claims are dependent from the above rejected claim and therefore also are rejected.

Set of claim 39 and 89

Claims 39-39 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Sugii in view of Mizuno et al. (IEEE ELECTRON DEVICE LETTER Vol. 21. No .5 May 2000/IDS).

Sugii teaches the claimed invention as applied to claims 32 and 38 except for the step of providing an insulator layer over the substrate and wherein the insulator layer comprises SiO₂.

Mizuno discloses "a strained-Si FET structure, MOSFET's on strained-Si/SiGe-on-Insulator (strained-SOI substrates). Mizuno states "[t]he strained-SOI structure consists of the strained-Si channel on a relaxed SiGe-on-buried-oxide-layer, as can be seen in the TEM photograph in Fig. 1" (page 230, 2nd column).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide an insulator layer over the substrate and wherein the insulator layer comprises SiO₂ in Sugii 's method in order to improve its superior electronic characteristics.

Regarding claim 89, Mizuno (page 230, 2nd column)discloses the step of providing an insulator layer comprises wafer bonding.

Art Unit: 2818

Set of claims 67-69

Claim 67 is rejected under 35 USC 102 (e) as being anticipated by Fitzgerald et al. (6881631 B2).

Fitzgerald teaches a method comprising:

providing a substrate (Si substrate);

providing a first strained layer (Strained-Si channel layer) disposed above the substrate, the first strained layer having an average surface roughness of no more than approximately 2 nm { Fitzgerald discloses a strained-Si channel layer where the measured surface roughness leas than 1nm in column 5, line 9).

providing a gate stack (especially see figs. 5A-B and refer to related text)) disposed above the first strained layer; and

providing device isolation regions 516.

Regarding claim 68 and 69, wherein the device isolation regions are STI regions and wherein the device isolation regions are LOCOS regions (especially see figs. 5A-B and refer to related texts).

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2818

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung A. Le whose telephone number is (571) 272-1784. The examiner can normally be reached on Monday-Tuesday and Thursday 6:00am- 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Loke can be reached on (571) 272-1657. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9306 for After Final communications.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For
